

The sector generation files are intended to be used with  
<http://www.travellermap.com/post.htm>

EQ 1105 - Full.rtf

EQ 993 - Full.rtf

- select for the "Sector Data" file,  
depending on what Traveller year you want to play in.

NoS - Year 993, 1105 - MetadataEQ.rtf

- both eras use the same border information, so use this for the  
XML Metadata file

Of course, you are free to rewrite it as you please, to fit  
your own campaign.

These files also contain the updated trade codes, related to  
population. This is the only difference between these files and the  
sector generation text files.

\*\*\*\*

Empty Quarter 993, 1105.xlsx

output version Empty Quarter 993, 1105.xls

- these files are what I use to manipulate data, etc.

the only difference is

1) the version of Excel, and

2) my use of concatenation in one column of the "output version",  
to create the rtf files.

You can delete this column without worry, or keep it  
and refine the output version to provide better results.

I used the "Convert XLS" program to help with the output: google  
it up if you want to get a free copy yourself.
